Project Scope Questionnaire for Laravel Web Development

Vision and Goals

- What is the primary vision or objective for this web development project?
- Can you specify the core problem that the application will solve?
- Who are the target users or audience of the web application?
- What are the desired outcomes of the project for you and the end-user?

Features and Requirements

- What are the must-have features for the web application?
- Are there any special user roles or permissions we need to consider?
- How should this application integrate with other systems?
- What features are nice to have and may be considered for future updates?

Timeframes

- What is the ideal timeline for the launch of the web application?
- Are there any key dates or events we should consider when planning the development schedule?
- What milestones would you like to establish to check project progress?

Budget

- What is the budget range allocated for this project?
- Are there any known financial constraints or limits we should be aware of during planning?
- How would you like to handle potential unforeseen expenses that may arise?

Resources

- What are the internal resources (staff, software, hardware) available to your team?
- Do you have any preferred technologies or tools you expect to be used in the project?
- What external resources (if any) do you anticipate needing?

Agile Mindset and Collaboration

- How familiar are you with the agile development process?
- What are your expectations regarding communication frequency and methods?
- How comfortable are you with an iterative approach to design and development?

Testing and Quality Assurance

- What level of involvement do you wish to have in the testing and QA process?
- Do you have any specific requirements for testing environments or protocols?
- How do you prefer to address issues found during development and beta testing?

Change Management

- How will we handle requests for changes or additions to the project scope after it's defined?
- Do you have a process in place for evaluating and implementing changes?

Communication and Collaboration

- Who will be our primary point of contact on your team throughout the project?
- How often would you like to have project updates or meetings?
- What collaboration tools or platforms do you prefer for project management and communication?

Feedback and Iteration

- What process do you envision for providing feedback on deliverables?
- How will we review and incorporate feedback into ongoing development phases?
